

TradeFlow v2

AI-powered inquiry-to-quote platform for Hong Kong trading and sourcing companies. Turn every customer email into a tracked opportunity, supplier RFQ, and winning quote — automatically.

September 2026 · Confidential

01 The Problem

HK trading companies lose revenue every day to manual, fragmented workflows.

TODAY'S REALITY

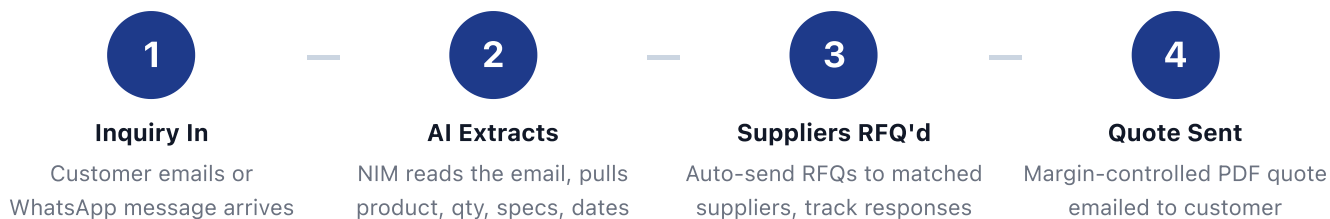

- Customer inquiries arrive across email, WhatsApp, and WeChat — with no unified inbox
- Sales reps manually copy-paste requirements into spreadsheets
- Supplier RFQs are sent via scattered email threads — impossible to track
- Quote creation takes 2-4 hours per opportunity using Excel + Word templates
- Follow-ups fall through the cracks — 60% of quotes never get a response
- Margin calculations are done on napkins — pricing errors cost 5-15% of profit

TRADEFLOW SOLUTION

- Unified AI-powered inquiry desk — all channels, one inbox
- AI extracts product specs, quantities, and requirements from any email instantly
- Structured RFQ workflow — send to multiple suppliers with one click
- Side-by-side supplier comparison with automated cost build-up
- Professional PDF quotes generated in under 2 minutes
- Automated follow-up sequences that run while you sleep

02 How It Works

From raw email to sent quote in four steps — AI handles the heavy lifting.

03 Core Features

Six modules that cover the entire trading operations workflow.

Unified Inquiry Desk

Every customer message — email, WhatsApp, web form — lands in one AI-powered inbox. Auto-detects language (English, Chinese, Cantonese, Spanish) and routes to the right team member.

Saves 3-5 hours/week per sales rep on email triage

AI Requirement Extraction

NVIDIA NIM reads customer emails and attachments (PDF, Excel, Word). Extracts product name, specs, quantity, target price, delivery date, and payment terms — with confidence scores per field.

Reduces quote prep time from 2-4 hours to under 10 minutes

Supplier RFQ Management

Send structured RFQs to multiple suppliers with one click. Track who responded, who's late, and compare quotes side-by-side. AI matches suppliers to products automatically.

Cuts supplier coordination time by 70%

Cost Engine & Margin Controls

Deterministic cost build-up across 9 components (product, tooling, packaging, inspection, shipping, freight, insurance, financing, contingency). Enforces minimum margin thresholds before quotes can be sent.

Prevents pricing errors that cost 5-15% of margin

Quote Builder (PDF & Email)

Professional branded quotes generated as PDF and HTML email. Sequential numbering (QT-2026-0001), version tracking, approval workflow, and one-click send to customer via Resend.

Automated Follow-ups

AI-generated follow-up sequences that reference specific products, quantities, and quote values — never generic "just checking in" messages. 4-step sequence over 21 days, auto-stops on customer reply.

Quote creation from 2-4 hours to under 2 minutes

Recover 25-40% of otherwise-lost opportunities

04 Value Delivered

Measurable impact for trading companies of all sizes.

10x
